

PROFESSIONAL SUMMARY

AI Product Manager with 8+ years of experience in consumer internet and online education, including leading growth for a business generating approximately \$2.9M in monthly revenue and managing product, operations, and cross-functional teams. Now independently building applied AI products for local events, Olympiad training, and travel content, using deterministic gates, regression evaluation, and human feedback to manage quality, token cost, and latency; the Olympiad platform is in a high-school pilot, while China Trailhead has published 50 guides and 500+ community replies, approximately 80% of which received an upvote or reply. Previously led an AI phone intent discovery and lead-routing product whose high-intent leads converted at 6x the rate of standard leads and contributed approximately \$286K in incremental monthly sales.

INDEPENDENT AI PRODUCTS

AI Builder | Boston, MA | Mar 2026-Present

- BosGoGo** (bosgogo.com): Independently developed an AI platform for local event discovery and social connection within Massachusetts' Chinese community and formed a 50-member core seed-user community. Separated event discovery from publication review in a two-stage agent workflow to reduce incorrect publication caused by the same flow generating and approving its own output, with deterministic gates for exceptions and low-confidence cases. Built a versioned 45-case Golden and Regression Set from real releases, rejections, human edits, and post-publication corrections to test grounding and deduplication in discovery plus false accepts and misses in review; ran same-version regressions after model, prompt, tool, or gate changes, tracked token usage and latency, and reduced weekly token cost by 40%.
- AI Olympiad Training Platform** (bostonsitepilot.site): Created an adaptive AI system for self-directed Olympiad training in regions with limited access to instructors, now in pilot at one high school in Shiyan, Hubei. Designed a multi-agent workflow combining a standardized question bank and knowledge graph with answer behavior, error causes, and staged retesting to update capability and mastery profiles and orchestrate personalized training; used teacher review and subsequent learning results to validate profiles and recommendations. Restructured prompts and staged outputs, reducing time to first visible AI response from 6 seconds to 3.
- China Trailhead** (chinatrailhead.com): Independently launched an English-language travel guide and content community for travelers to China, using Reddit to identify real user needs and Chinese government and other official sources as the factual baseline. Built a 50-case human-validated Golden Set covering high-frequency and high-risk visa, payment, and transportation scenarios, combining deterministic rules, a rubric for freshness, source quality, rigor, and sensitivity, LLM-as-a-Judge evaluation, and an automated release gate for continuous regression testing. By Jul 2026, published 500+ human-reviewed community replies-approximately 80% receiving an upvote or reply-and distilled recurring needs into 50 English guides.

PROFESSIONAL EXPERIENCE

Palfish

Product & Operations Lead

Beijing, China
 Jun 2020-Jun 2024

- Reported to a co-founder and led growth for a business generating approximately \$2.9M in monthly revenue, directly managing a 3-10-person product and operations team and leading a cross-functional core team of 10+ across acquisition, lead conversion, post-purchase service, and retention. Built end-to-end performance monitoring and analytics to guide product, marketing, and sales decisions; maintained monthly revenue attainment at 90%-110% across a business serving approximately 600 sales representatives, 40M registered users, and 200K paying users.
- Directed an AI phone-based intent discovery and lead-routing product, defining intent labels and routing AI voice-call outcomes into sales queues by user intent; high-intent leads converted at 1.8%, 6x the rate of standard leads, and contributed approximately \$286K in incremental monthly sales.
- Transformed the end-to-end customer journey, shifting post-purchase service from a sales-led model to a productized workflow, redesigning critical touchpoints within the first 30 days and standardizing execution through rules-based automated procedures; reduced the 30-day refund rate from 10% to 3% and increased referral revenue by 40%, with referrals reaching 35% of total revenue.

EXPERIENCE (CONTINUED)

Palfish

Product & Operations Lead (continued)

Beijing, China
Jun 2020-Jun 2024

- Managed the response to approximately \$4.3M in refund pressure following 2021 regulatory changes, designing phased refunds, course-benefit compensation, and customer communication while restructuring sales labor costs; stabilized cash flow and restored operating cadence within three months.
- Overhauled existing-customer operations and target management when new-user acquisition was constrained, segmenting customer portfolios to create an operating analysis and monthly target-setting model that replaced revenue planning based primarily on historical sales; increased repeat-customer revenue share from 40% to 70%.
- Implemented marketing infrastructure from scratch by integrating app push, SMS, and WeChat messaging with a modular campaign-configuration platform; handled approximately 100K messages daily and supported 20+ campaigns monthly, reduced engineering effort per campaign from 3-5 days to 1 day, cut SMS costs by approximately 50%, and supported 4 business lines for 3+ years.
- Established a Rednote UGC growth channel, growing 3 accounts to 20K+ followers each within 3 months and creating a social-to-owned-channel conversion funnel; achieved 30% Top-10 coverage for core keywords, a 4% lead conversion rate, approximately \$860 average order value, and about 10% of total revenue from the channel.

VIPKID

Senior Product Manager

Beijing, China
Sep 2019-May 2020

- Developed a community-based sales-conversion program from scratch, coordinating a 15-person cross-functional team to redesign user engagement and sales conversion; improved business ROI from 1.03 to 1.83, added approximately \$143K in monthly revenue, and enabled reuse across six business lines.
- Owned the development and rollout of a multi-channel marketing engagement platform integrating WeChat Official Accounts and other outreach channels, with real-time end-to-end performance monitoring that supported audience segmentation and effectiveness analysis across 50 WeChat Official Accounts and 30M followers.

Sohu

Product Manager

Beijing, China
Jun 2016-Sep 2019

- Redesigned a creator CRM back end and established standardized lifecycle operations, supporting growth from 50K to 140K creator accounts and from 10 to 80 internal operators across 10+ content verticals.
- Drove the design and launch of a configurable creator campaign and voting platform supporting 55 channel campaigns and 27 industry programs, reaching 20K+ creators, driving production of 50K+ pieces of content, and generating 100M+ impressions.

EDUCATION

Brandeis University | M.S. in Business Analytics (STEM)

Aug 2024-Jul 2026 | GPA: 3.95

Honors: Student Commencement Speaker; Brandeis Asper Competition Champion; Ain Family Entrepreneurship Award

Chongqing University of Posts and Telecommunications | B.E. in Computer Science

Sep 2012-Jun 2016 | Top 10%

COMMUNITY INVOLVEMENT

Board Director, Massachusetts Asian Restaurant Association (MARA), organizing industry events and partnerships and providing marketing and customer-acquisition strategy support for 400+ Greater Boston restaurant operators; initiator of a ~500-member reading community with 1,560 consecutive daily morning shares; founder of a ~100-member nonprofit running club in Beijing (2023-2024), co-hosting events with the Beijing Marathon Association and earning its endorsement; volunteer supporting Harvard China Forum, the Massachusetts State House Lunar New Year Celebration, and Boston Chinatown civic events with state and city leaders (2025-2026).
